

AZAR S

DevOps Engineer | CI/CD | Cloud Infrastructure | Kubernetes | Terraform
Bengaluru, India | +91 7899035306 | azar.sameeulla@outlook.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 3+ years of experience implementing CI/CD pipelines (GitHub Actions, Jenkins), automating cloud infrastructure on AWS, and managing container workloads with Docker and Kubernetes (k3s, EKS). Proficient in Infrastructure-as-Code with Terraform, system monitoring using Prometheus and Grafana, and DevSecOps practices (Trivy, SonarQube). Skilled in Linux administration, Python/Bash scripting, NGINX, and networking fundamentals including VPC, security groups, load balancers, and firewall configuration. Proven track record of delivering 99.99% uptime across 50+ EC2 instances, leading ISO 27001 certification preparation, and reducing operational overhead through intelligent automation.

TECHNICAL SKILLS

CI/CD & Automation: Jenkins, GitHub Actions, GitLab CI (familiar), CircleCI (familiar)

Cloud Platforms: AWS (EC2, S3, RDS, IAM, VPC, Lambda, EventBridge, CloudWatch, ECR, Amplify, Backup Vault, EKS)

Containers & Orchestration: Docker, Kubernetes (EKS, k3s), Helm, NGINX Ingress Controller

Infrastructure as Code: Terraform, Ansible

Monitoring & Observability: Prometheus, Grafana, AWS CloudWatch, ELK Stack (familiar)

Security & DevSecOps: Trivy, SonarQube, Certbot/SSL, IAM Policies, Security Groups, Firewall rules

Scripting & Programming: Python (Boto3), Bash, Shell scripting

Databases: MongoDB Atlas, AWS RDS, PostgreSQL

OS & Networking: Linux/Unix administration, VPC, Subnets, Routing, Load Balancers, NGINX reverse proxy

Version Control: Git, GitHub

PROFESSIONAL EXPERIENCE

DevOps Engineer | SPM Global Technologies (Client: DealDox CPQ) | Bengaluru, KA

Apr 2024 – Present

- Architected and maintained multi-environment CI/CD pipelines using GitHub Actions for DealDox CPQ — automating build, test, and deployment of React frontend (AWS Amplify) and Node.js backend (EC2), with branch-based promotion from dev → QA → production.
- Managed 50+ EC2 instances across environments using Python (Boto3) automation for provisioning, IAM role assignments, and lifecycle operations, achieving 99.99% uptime and ISO 27001 compliance.
- Set up and maintained a k3s Kubernetes cluster on a Hostinger VPS with NGINX Ingress Controller, SSL termination via Certbot, and systemd-managed Node.js backend services migrated from PM2.
- Resolved critical DMARC/SPF alignment failures for dealdox.io with Amazon SES, correcting envelope sender mismatch that was causing email delivery rejections in production.
- Configured NGINX reverse proxy with Certbot SSL for multiple subdomains (devqa-api.dealdox.io, cms.spmglobaltech.com), resolving CORS preflight failures, redirect loops, and SSL coverage gaps.
- Built serverless cost-optimization workflows using AWS Lambda + EventBridge for scheduled EC2 start/stop and automated S3 data lifecycle policies, reducing infrastructure spend.
- Set up Prometheus + Grafana observability stack and CloudWatch dashboards and alarms, reducing downtime incidents by 30% through proactive alerting.
- Integrated Trivy container image scanning and SonarQube static analysis into CI/CD pipelines, strengthening DevSecOps posture across all deployments.
- Implemented automated MongoDB and PostgreSQL backup pipelines to S3 with weekly schedules and retention policies for disaster recovery.
- Led ISO 27001 certification preparation for DealDox — authored Information Security Policy (ISP-001) and coordinated assessment with ICV Assessments as the certification body.
- Set up a second Strapi CMS instance (cms.spmglobaltech.com, port 1338) with full CI/CD, PM2, Nginx, SSL, and Route 53 DNS configuration; migrated PostgreSQL database from Heroku RDS to VPS.

DevOps Engineer | Simtekway Solutions Pvt Ltd | Bengaluru, KA

Jan 2024 – Mar 2024

- Built end-to-end GitHub Actions CI/CD pipelines for Node.js and React applications, automating build, test, Docker image build, ECR push, and EC2 deployment stages — reducing release time by 35%.
- Automated AWS infrastructure operations using Python (Boto3): EC2 instance provisioning and teardown, S3 bucket management, IAM role creation, and RDS snapshot scheduling.
- Implemented AWS Lambda + EventBridge event-driven workflows for automated maintenance tasks and CloudWatch alarm-based auto-remediation, improving system self-healing capability.
- Managed MongoDB Atlas clusters and AWS RDS instances for client projects, including backup configuration, connection pooling, and access control via IAM and VPC security groups.
- Secured application deployments with NGINX reverse proxy, Certbot SSL certificates, and integrated Trivy for Docker image vulnerability scanning in the CI pipeline.

Associate DevOps Engineer | Corefront Technologies Pvt Limited | Bengaluru, KA

Feb 2023 – Dec 2023

- Supported CI/CD pipeline setup and maintenance using GitHub Actions and Jenkins for web application deployments, enabling consistent and repeatable build and release workflows.
- Managed AWS infrastructure including EC2 instances, S3 buckets, and IAM roles; performed routine provisioning, access control, and environment configuration tasks.
- Wrote and maintained Bash shell scripts to automate repetitive Linux server operations — log rotation, disk cleanup, service health checks, and scheduled maintenance tasks.
- Administered Ubuntu Linux servers for client web applications: managed users, file permissions, cron jobs, systemd services, and performed package upgrades and patching.
- Containerized web applications using Docker, built and managed images, and assisted in configuring deployment environments for development and staging setups.

KEY PROJECTS

3-Tier Application on AWS (React + Node.js + RDS)

Provisioned full 3-tier infrastructure with Terraform — React frontend on AWS Amplify, Node.js backend on EC2 with Docker + Kubernetes (EKS), and AWS RDS database. Integrated SonarQube code analysis and Trivy image scanning into the GitHub Actions pipeline. Configured NGINX Ingress with SSL termination and monitoring via CloudWatch.

Scalable Microservices on AWS EKS

Designed and deployed Dockerized microservices on AWS EKS using Helm charts and NGINX Ingress Controller with SSL. Configured CloudWatch dashboards for observability across pods and services. Implemented horizontal pod autoscaling and rolling update strategies for zero-downtime deployments.

Serverless Infrastructure Automation (Lambda + EventBridge)

Built a serverless automation framework using AWS Lambda and EventBridge rules for EC2 start/stop scheduling, automated S3 data lifecycle policies, and on-demand backups — reducing infrastructure costs and eliminating manual intervention.

MongoDB Production Backup to AWS S3

Implemented production-grade MongoDB backup system that streams daily dumps directly to S3 with zero local disk usage. Features AES-256 server-side encryption, S3 versioning, and automated lifecycle tiering (STANDARD_IA → GLACIER → DEEP_ARCHIVE), reducing storage costs by ~60%.

EDUCATION

Bachelor of Engineering (B.E.) — Electrical & Electronics Engineering

SDM Institute of Technology, Mangalore | 2020
